

Serstech SERS kit

Serstech's patented SERS kit significantly amplifies the Raman signal of substances with weak Raman signatures. Using the SERS kit, Serstech's instruments can detect very low concentration levels of narcotics, explosives, TICs and many other types of chemicals.

The SERS kit works equally well with the Serstech 100 Indicator and Serstech Arx/Arx+. The kit is patented and utilizes a 3D-vibration to strengthen the signal even more than traditional SERS solutions and to more thoroughly examine the sample.

The kit can be delivered in the same carrying case as any of Serstech's instruments or separately in its own case.
